HEAVY WEIGHT CONTROL

Case Study No.6

We have been in the machined parts manufacturing ring since 2000. This adjustment sleeve for setting the tracking on heavy goods vehicles is essentially what sets our company apart in this ring.

Many years of experience, a high level of understanding for the customer, comprehensive expertise in production and perfect control of the material.

In our field we are masters of this ring;
we are a heavyweight.

Material and challenge

- High demands in terms of machine precision
- Continuous 100 mm long internal thread with very tight thread tolerance
- Complex processing
- Production in a single cycle
- Free-cutting steel

If you are looking for someone to manufacture and construct difficult and impossible machined parts, talk to Dreher GmbH. Machined parts that other providers can't handle: hard-to-cut materials, extreme geometries.

Dreher GmbH operates state-of-the-art machinery made by reputable German manufacturers and operated by well-trained and motivated people.

**Dreher CNC precision machined parts.
The difficult. The impossible. All of them.**
